

SmartHealth AI Skin Screening Report

Report Information

Report ID:	3ae403db-ef09-49d4-90e8-85b2f94ca9c3
Date/Time:	2026-08-26T12:35:44.296733
User ID:	mahsa arj

Patient/User Information

Age:	22
Skin Type:	oily
Allergies:	l, a, t, e, x

AI Model Information

Model Name:	PanDerm
Predicted Class:	melanoma
Model Confidence:	65.99%
IMPORTANT:	IMPORTANT: This confidence score represents the model's certainty in its prediction, NOT

Top 3 Predictions

Rank	Class	Probability
1.	melanoma	65.99%
2.	melanocytic nevus	19.28%

3.

basal cell carcinoma

6.57%

All Model Probabilities

Class	Probability
melanoma	65.99%
melanocytic nevus	19.28%
basal cell carcinoma	6.57%
benign keratosis	2.25%
squamous cell carcinoma	1.78%
dermatofibroma	1.60%
actinic keratosis	1.59%
vascular lesion	0.94%

Explainability Visualization

Explainability Disclaimer: The heatmap is an AI explainability visualization showing image regions that contributed more strongly to the model prediction. It is not a clinically validated localization of cancer and should not be interpreted as a diagnostic finding.

User Symptoms

• I am concerned about this skin lesion because it does not appear completely symmetrical and seems to contain multiple colors. The border also appears somewhat irregular. Over the past few months, I have noticed changes in its size and appearance, and it sometimes itches. Please carefully analyze the image and identify the actual visible features of the lesion. Perform a detailed ABCDE assessment, explain which findings support or do not support the AI prediction, compare it with the alternative predictions, and incorporate my symptoms, medical history, previous changes, and profile information. Please clearly distinguish between visual observations and an actual medical diagnosis.

Risk Assessment

AI Screening Indicator:	high
Screening Score:	38/100
Urgency:	Schedule a dermatologist appointment within 2-4 weeks
IMPORTANT:	IMPORTANT: This is an AI-generated screening indicator, NOT a clinically validated cancer-

ABCDE Assessment

ABCDE Score:	1/5
Asymmetry	Not reported
Border	Not reported
Color	Not reported
Diameter	Not reported
Evolution	Present

Image Quality Assessment

Image Quality: The image quality is insufficient for reliable screening. Resolution too low: 243x160 (minimum: 200x200) Please upload a clearer, well-lit close-up image of the skin area.

Recommended Next Steps

- timeframe: Within 2-4 weeks
- specialist: Dermatologist
- visit_type: Skin lesion evaluation
- bring: ['Photos of the lesion', 'Medication/allergy list']
- questions: ['Is this lesion cancerous or precancerous?', 'What diagnostic tests are needed?', 'What are my treatment options?']

Medical Disclaimer

This AI screening is for educational purposes only and is NOT a medical diagnosis.

Only a board-certified dermatologist can diagnose skin cancer through clinical examination and biopsy.

When in doubt, always seek professional care.
