

SmartHealth AI Skin Screening Report

Report Information

Report ID:	5d537abd-0657-46ee-87ae-969899b9b694
Date/Time:	2026-08-21T12:46:36.971317
User ID:	mahsa arj

Patient/User Information

Age:	22
Skin Type:	oily
Allergies:	latex

AI Model Information

Model Name:	PanDerm
Predicted Class:	basal cell carcinoma
Model Confidence:	85.92%
IMPORTANT:	This confidence score represents the model's certainty in its prediction, NOT the probability

Top 3 Predictions

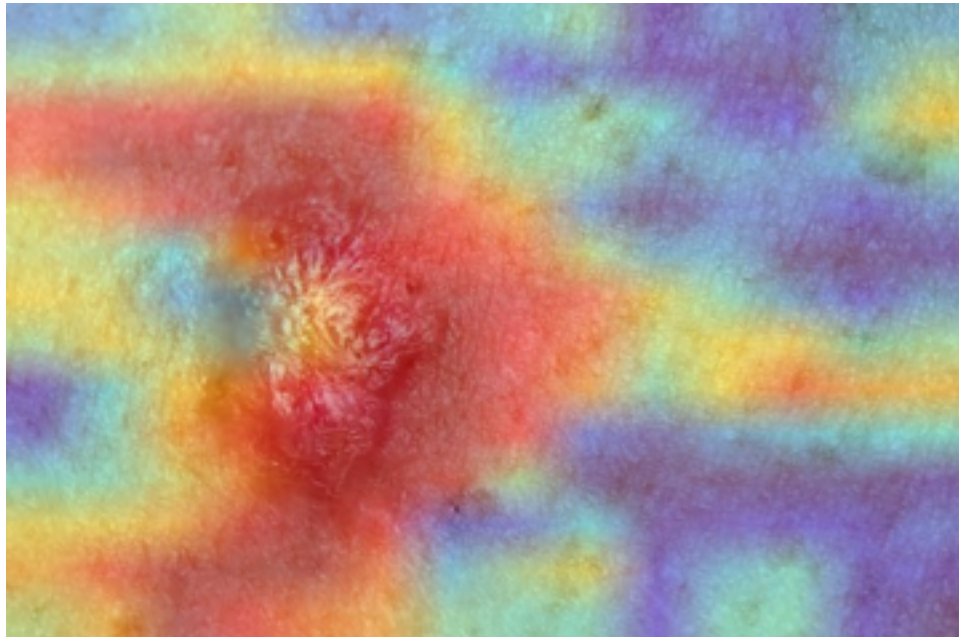

Rank	Class	Probability
1.	basal cell carcinoma	85.92%
2.	melanocytic nevus	3.11%

3. dermatofibroma 2.42%

All Model Probabilities

Class	Probability
basal cell carcinoma	85.92%
melanocytic nevus	3.11%
dermatofibroma	2.42%
vascular lesion	2.26%
melanoma	2.02%
squamous cell carcinoma	1.45%
actinic keratosis	1.43%
benign keratosis	1.39%

Explainability Visualization

Explainability Disclaimer: The heatmap is an AI explainability visualization showing image regions that contributed more strongly to the model prediction. It is not a clinically validated localization of cancer and should not be interpreted as a diagnostic finding.

User Symptoms

• I have had this skin lesion for some time. It appears slightly raised and shiny, with pink and brown areas. I can see some small visible blood vessels in parts of the lesion. It occasionally itches, and recently I noticed a small crust or scab on the surface. Please carefully analyze the image and explain which visible features are consistent with the AI prediction and which may not fit. Also assess ABCDE when possible and combine the image findings with my symptoms, medical history, and profile information.

Risk Assessment

AI Screening Indicator:	urgent
Screening Score:	37/100
Urgency:	See a dermatologist within 1-2 weeks (sooner if lesion is changing)
IMPORTANT:	This is an AI-generated screening indicator, NOT a clinically validated cancer-risk score.

ABCDE Assessment

ABCDE Assessment: Not reliably assessed by the current automated analysis.
ABCDE criteria should be evaluated by a dermatologist during clinical examination.

Image Quality Assessment

Image Quality: Acceptable for analysis

Recommended Next Steps

- timeframe: Within 1-2 weeks (sooner if rapidly changing)
- specialist: Board-certified dermatologist
- visit_type: Urgent skin cancer screening
- bring: ['Clear photos of the lesion (with dates if available)', 'List of medications and allergies', 'Family history of skin cancer', 'ABCDE symptom notes']

- questions: ['Could this be melanoma or another skin cancer?', 'Do I need a biopsy?', 'How urgently should this be treated?', 'What follow-up schedule do you recommend?']

Medical Disclaimer

This AI screening is for educational purposes only and is NOT a medical diagnosis.
Only a board-certified dermatologist can diagnose skin cancer through clinical examination and biopsy.
When in doubt, always seek professional care.
