

# SmartHealth AI Skin Screening Report

## Report Information

|            |                                      |
|------------|--------------------------------------|
| Report ID: | 67c4093e-bd9d-434f-8271-e3c33aa03c6d |
| Date/Time: | 2026-08-13T13:18:27.141434           |
| User ID:   | mahsa arj                            |

## Patient/User Information

|            |       |
|------------|-------|
| Age:       | 22    |
| Skin Type: | oily  |
| Allergies: | latex |

## AI Model Information

|                   |                                                                                               |
|-------------------|-----------------------------------------------------------------------------------------------|
| Model Name:       | PanDerm                                                                                       |
| Predicted Class:  | squamous cell carcinoma                                                                       |
| Model Confidence: | 61.58%                                                                                        |
| IMPORTANT:        | This confidence score represents the model's certainty in its prediction, NOT the probability |

## Top 3 Predictions

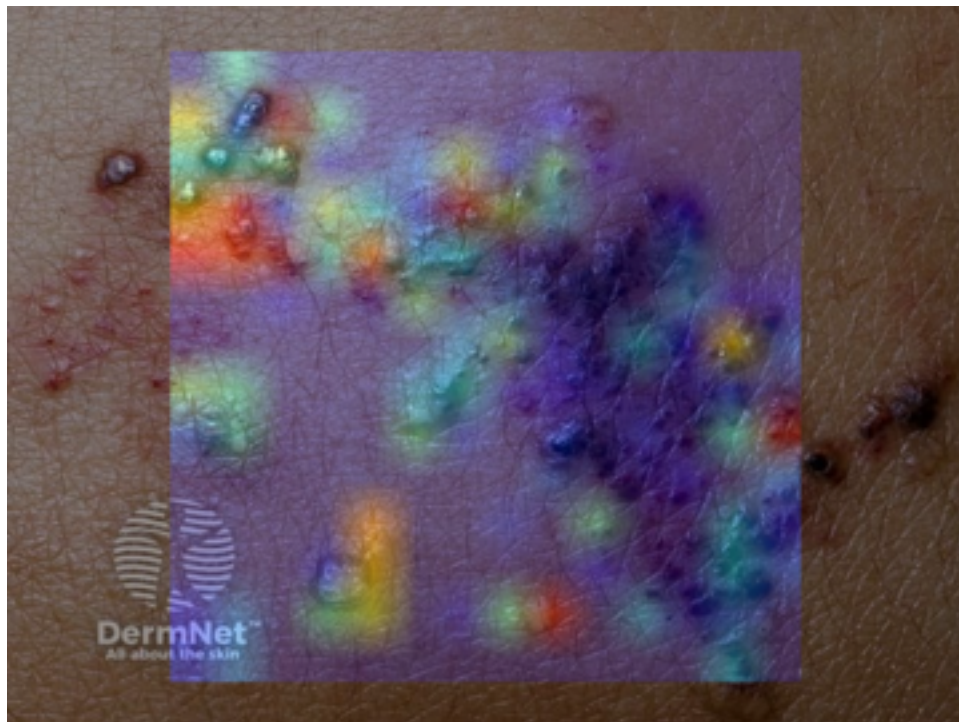

| Rank | Class             | Probability |
|------|-------------------|-------------|
| 1.   | melanocytic nevus | 61.58%      |
| 2.   | melanoma          | 17.19%      |

3. benign keratosis 11.88%

## All Model Probabilities

| Class                   | Probability |
|-------------------------|-------------|
| melanocytic nevus       | 61.58%      |
| melanoma                | 17.19%      |
| benign keratosis        | 11.88%      |
| basal cell carcinoma    | 2.72%       |
| squamous cell carcinoma | 2.34%       |
| actinic keratosis       | 1.48%       |
| vascular lesion         | 1.42%       |
| dermatofibroma          | 1.38%       |

## Explainability Visualization

Explainability Disclaimer: The heatmap is an AI explainability visualization showing image regions that contributed more strongly to the model prediction. It is not a clinically validated localization of cancer and should not be interpreted as a diagnostic finding.

## Risk Assessment

|                         |                                                                                            |
|-------------------------|--------------------------------------------------------------------------------------------|
| AI Screening Indicator: | high                                                                                       |
| Screening Score:        | 32/100                                                                                     |
| Urgency:                | Schedule a dermatologist appointment within 2-4 weeks                                      |
| IMPORTANT:              | This is an AI-generated screening indicator, NOT a clinically validated cancer-risk score. |

## ABCDE Assessment

ABCDE Assessment: Not reliably assessed by the current automated analysis.  
ABCDE criteria should be evaluated by a dermatologist during clinical examination.

## Image Quality Assessment

Image Quality: Acceptable for analysis

## Recommended Next Steps

- timeframe: Within 2-4 weeks
- specialist: Dermatologist
- visit\_type: Skin lesion evaluation
- bring: ['Photos of the lesion', 'Medication/allergy list']
- questions: ['Is this lesion cancerous or precancerous?', 'What diagnostic tests are needed?', 'What are my treatment options?']

## Medical Disclaimer

This AI screening is for educational purposes only and is NOT a medical diagnosis.  
Only a board-certified dermatologist can diagnose skin cancer through clinical examination and biopsy.  
When in doubt, always seek professional care.
