

# SmartHealth AI Skin Screening Report

## Report Information

|            |                                      |
|------------|--------------------------------------|
| Report ID: | 75a0be80-36eb-4c4a-8943-0b923661f7d4 |
| Date/Time: | 2026-08-26T12:26:34.996043           |
| User ID:   | mahsa arj                            |

## Patient/User Information

|            |               |
|------------|---------------|
| Age:       | 22            |
| Skin Type: | oily          |
| Allergies: | l, a, t, e, x |

## AI Model Information

|                   |                                                                                          |
|-------------------|------------------------------------------------------------------------------------------|
| Model Name:       | PanDerm                                                                                  |
| Predicted Class:  | benign keratosis                                                                         |
| Model Confidence: | 86.20%                                                                                   |
| IMPORTANT:        | IMPORTANT: This confidence score represents the model's certainty in its prediction, NOT |

## Top 3 Predictions

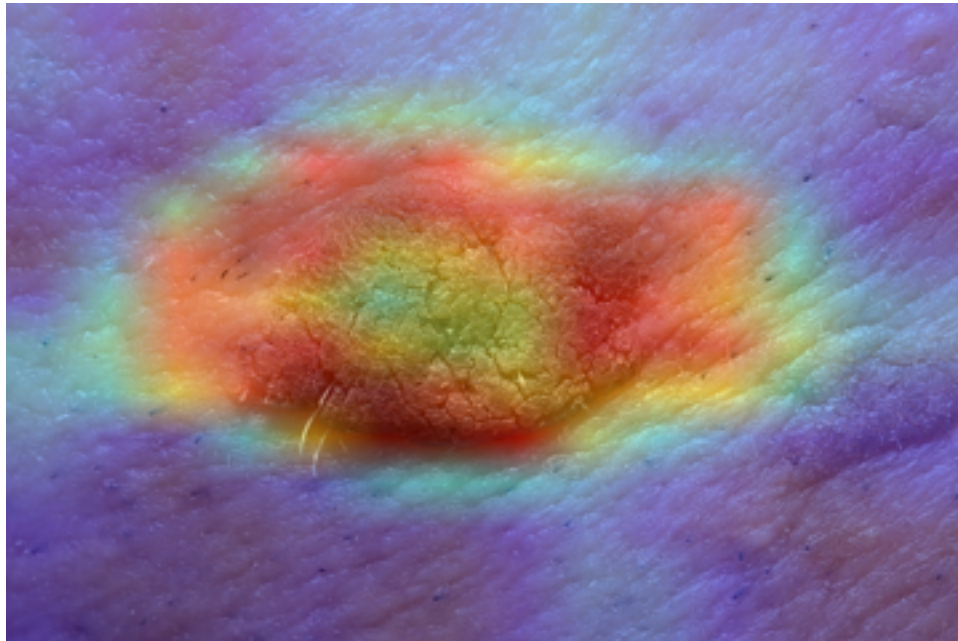

| Rank | Class             | Probability |
|------|-------------------|-------------|
| 1.   | benign keratosis  | 86.20%      |
| 2.   | melanocytic nevus | 3.22%       |

3. dermatofibroma 2.60%

## All Model Probabilities

| Class                   | Probability |
|-------------------------|-------------|
| benign keratosis        | 86.20%      |
| melanocytic nevus       | 3.22%       |
| dermatofibroma          | 2.60%       |
| vascular lesion         | 2.17%       |
| actinic keratosis       | 1.86%       |
| squamous cell carcinoma | 1.71%       |
| melanoma                | 1.22%       |
| basal cell carcinoma    | 1.02%       |

## Explainability Visualization

Explainability Disclaimer: The heatmap is an AI explainability visualization showing image regions that contributed more strongly to the model prediction. It is not a clinically validated localization of cancer and should not be interpreted as a diagnostic finding.

## User Symptoms

• This lesion is clearly different from the surrounding skin and has a dark brown color. It appears slightly raised, with a relatively rough surface and a waxy or stuck-on appearance. It sometimes causes mild itching, but there has been no bleeding. Please carefully analyze the image and describe the visible characteristics of the lesion. Explain how these findings relate to the AI prediction, assess ABCDE when appropriate, and consider my symptoms, medical history, and profile information in the final explanation.

## Risk Assessment

|                         |                                                                                            |
|-------------------------|--------------------------------------------------------------------------------------------|
| AI Screening Indicator: | low                                                                                        |
| Screening Score:        | 9/100                                                                                      |
| Urgency:                | Routine skin check recommended; monitor for ABCDE changes                                  |
| IMPORTANT:              | IMPORTANT: This is an AI-generated screening indicator, NOT a clinically validated cancer- |

## ABCDE Assessment

ABCDE Assessment: Not reliably assessed by the current automated analysis.  
ABCDE criteria should be evaluated by a dermatologist during clinical examination.

## Image Quality Assessment

Image Quality: Acceptable for analysis

## Recommended Next Steps

- timeframe: At next routine checkup or annual skin exam
- specialist: Primary care or dermatologist
- visit\_type: Preventive skin screening
- bring: []

- questions: ['How often should I have skin checks?', 'What sun protection do you recommend for my skin type?']

## Medical Disclaimer

This AI screening is for educational purposes only and is NOT a medical diagnosis.  
Only a board-certified dermatologist can diagnose skin cancer through clinical examination and biopsy.  
When in doubt, always seek professional care.
